DETAILED ACTION

1. *The response of 5/08/07 has been received and entered.*
2. *Claims 1-32 are pending.*

Reasons for Allowance

The Examiner has considered Applicant's arguments and has found them to be persuasive.

Claim 1 has recited "store ones of said portions to ones of said distributed memory units, said security controller thereby systematically periodically redistributing said database over said distributed memory units."

Upon further consideration of the prior art, the Examiner notes that even though the combination of a defragmenting system in a database system might be so arranged as to cause a database file to be periodically redistributed over memory units, that does not necessarily imply that the establishing of repeated views of the said database in Hardjono would be performed responsive with the defragmenting process.

For this reason, the Examiner has found the Applicant's arguments persuasive in overcoming the art of record.

Claims 6, 11, 15, 19 are allowable for the same reasons as claim 1.

Art Unit: 2132

All other dependent claims are allowable because their independent claims are allowable.

Conclusion

3. The following art not relied upon is made of record:

- US patent 5884299 discloses a method where a database is divided through SQL queries and where the views of the database are established based on the results of processing the SQL queries.
